

Warm-Up 27

1) $10^2 + 7^0 (23) - 11(2) =$ 7.EE.3	4) Factor the linear expression using the greatest common factor: $12x + 36$ 7.EE.1
2) In the expression $5 + (-7)$, how far is the sum from 5? 7.NS.1b	5) Three and one-half pizzas sit in front of 14 hungry people. If they finish the pizzas, and each person eats the same amount, find the unit rate in pizza per person. 7.RP.1
3) Evaluate using the Commutative Property: $30 (56) (5) (20)$ 7.NS.2c	

Warm-Up 27
