

Warm-Up 40

1) $32 + (-57) + (-68) + 20 =$ 7.NS.3	4) Find the simple interest on \$40,000 at 8% interest for 2.5 years. 7.RP.3
2) Solve the equation. $18x + 27 - 42x - 12 = -81$ 7.EE.4a	5) One of two complementary angles is 87° . Let x = the measure of the other complementary angle. Write and solve an equation to find the measure of angle x . 7.G.5
3) The letters in the word “magnificent” are placed in a bag. If a letter is picked at random, what is the probability that the letter “i” will be selected? Give the answer as a fraction in simplest form. 7.SP.5
