

Warm-Up 86

1) $-3(-5x + 6y - 1) =$	4) Rewrite the following subtraction problem as adding the additive inverse, then solve. $-437 - (-93) =$
7.NS.2a	7.NS.1c
2) Find y if $y = -8x + 64$ and $x = -13$.	5) Are the two quantities in a proportional relationship?
7.EE.4a	
3) A coin is flipped and a number cube is rolled. What is the probability of getting tails and a number greater than 5?	
7.SP.8a	7.RP.2a
