

Warm-Up 83

1) $9(3 - 7) \div (3 + 7) =$ 7.EE.3	4) How many outcomes are possible if you roll a number cube and then select a card from a standard deck with 52 cards? 7.SP.8b
2) Evaluate using the Commutative Property: $20(63)(25)(2)$ 7.NS.2c	5) There were 150 baseball players on 6 major league teams. Each team has the same number of players. Let t = total players and n = the number of teams. Write an equation that can be used to represent the total number of players on n teams. 7.RP.2c
3) Find the area of a rectangle with length $8x$ and width $4x$. 7.G.6
