Warm-Up 21

1) 12(-2)(-15)(5) =

7.NS.2a

2) What is the sum of -123 and its opposite?

7.NS.1a

3) Find the simple interest on $20,000 at 6% interest for 3 years.

7.RP.3

4) If Leanne multiplied her food bill by 1.2 to get her total restaurant bill, what percent tip was she leaving?

7.EE.2

5) One of two complementary angles is 37°. Let x = the measure of the other complementary angle. Write and solve an equation to find the measure of angle x.

7.G.5
